

What is Water Solutions®?

Convenient!

Water Solutions® is a convenient way for plant enthusiasts and amateurs alike to save time, water and money. The water absorbent granules can expand up to 400 times their weight in water. That water is then slowly released back into the soil (typically allows for double the time between usual watering), allowing plants to continue to draw essential moisture for healthy growth without any additional labour on the part of the plant owner.

Earth Friendly!

All of the components of this package are earth-friendly, and are suitable for a variety of applications, including annuals, perennials, hanging baskets, container gardens, tree seedlings and indoor plants. This product is safe to use around ponds, pets and children.

Unlike the petroleum based products that have been coming out of China for years, this product is not harmful to the environment, and it gives 95% of the water back to the root system. While petroleum based products are great at retaining water, their release of the water back to the root system is not nearly as effective as Water Solutions®.

A Great Source of Nutrients!

Water Solutions® contains sea kelp, alfalfa and humate. There is enough nutrients in a packet to nourish a 10" Hanging Basket for a full season. Water Solutions® will continue to provide nutrients and provide an additional water source for up to six months. Water Solutions® comes in an all natural hemp teabags and will compost in a short period of time after being planted. Additionally, Water Solutions® has been found to reduce Liverwort because it wicks the moisture from the soil surface to the base of the roots, hence reducing the ill-effects of this damaging moss.

Established!

While Water Solutions® is relatively new at retail, it has been successfully used for years in commercial applications. Golf courses, Landscapers and Tree Planters use the Water Solutions® formula to maintain high yields under less than desirable conditions.

Water Solutions® saves time for the busy individual by reducing watering frequency and providing the perfect solution for patio planters, vacation homes and plants in water restricted zones or other harsh plant environments.
